

GO-TO-MARKET PLAN

District by Zomato

Amusements and Activities: Reviews and Plan with Friends

Launch Strategy across India

Document Version	v1 May 2026
Status	Draft
Product POC	Naveen Gupta
Covers	PRD 1: Reviews and Ratings + PRD 2: Plan with Friends
Vertical	District Amusements and Activities

01. Where District Stands Today

Any GTM plan must start with the honest numbers, not aspirations.

Metric	Number	Source
District app downloads	6.5 million+	Zomato Q3 FY25 earnings
Zomato going-out business annualised GOV	Rs 10,000 crore	Zomato Q3 FY25 shareholder letter, Rahul Ganjoo statement
Going-out GOV growth guidance (management stated)	40%+ YoY	Zomato Q3 FY25 shareholder letter
Going-out quarterly GOV (Q3 FY25, actual reported)	Rs 2,495 crore	Zomato Q3 FY25 earnings
Zomato food delivery monthly transacting customers	20.7 million	Zomato Q2 FY25 earnings
Paytm Insider acquisition cost (events supply base)	Rs 2,048 crore	Zomato, September 2024
District active cities where Activities vertical is live	Delhi NCR, Mumbai, Bengaluru, Jaipur, UAE	district.in product audit, May 2026
Activity reviews on District today	Zero	Product audit, May 2026
Group planning feature on District today	Does not exist	Product audit, May 2026

The going-out business is growing at 40%+ YoY and management has publicly committed to it becoming Zomato's third largest B2C business. The Activities vertical is one of the fastest-growing segments within going-out and is also the least product-invested. Reviews do not exist. Group planning does not exist. This GTM covers the launch of both.

02. What We Are Launching and Why Together

This GTM covers two features launching in sequence within the same vertical:

Feature	What it solves	Who it serves
Reviews and Ratings (Phase 1, launches first)	Trust gap: users leave District to check Google Maps before booking any amusement venue. Reviews keep them inside the funnel.	All Activity and Amusement browsers. Especially high-consideration bookers spending Rs 700 to Rs 5,000 per visit.
Plan with Friends (Phase 2, launches 6 to 8 weeks after Reviews)	Coordination gap: group outings to amusement parks die in WhatsApp chats because there is no tool to confirm headcount, agree on a venue, and book together.	Groups of 3 to 8 people planning amusement parks, go-kart sessions, adventure parks. Ages 18 to 32, metro cities.

Reviews launches first because it is the trust foundation. A user who receives a Plan with Friends invite and lands on a venue page with verified reviews is more likely to confirm attendance than one who sees a blank listing. The two features are designed to compound each other: Reviews builds trust for the individual booker, Plan with Friends converts that trust into a group transaction.

03. Target Audience

Primary: The Activity Booker (Reviews feature)

Age and Location	18 to 35 years, metro and Tier 1 cities: Delhi NCR, Bengaluru, Mumbai, Jaipur
Behavior	Browses District for activities, checks Google Maps or JustDial for reviews, comes back to book or drops off entirely
Occasions	Family day out (amusement parks, water parks, KidZania), couple outing (go-karting, adventure), solo experience (escape rooms, museums)
Booking value	Rs 700 to Rs 5,000 per transaction depending on venue and group size
Why they matter	District's going-out GOV is Rs 10,000 crore annually. Activities is an underpenetrated segment within this. Every conversion improvement in Activities directly adds to GOV.

Primary: The Group Planner (Plan with Friends feature)

Age and Location	18 to 28 years, college students and young working professionals, Delhi NCR, Bengaluru, Mumbai launch cities
Behavior	Organizes weekend outings, team outings, birthday plans. Starts coordination on WhatsApp. Plan collapses before booking because no single person takes ownership.
Group size	3 to 8 people per session. Target venues: Smaaash, Worlds of Wonder, Wonderla, KidZania, go-kart tracks.
Booking value	Rs 3,000 to Rs 15,000 per group session depending on venue and headcount
Why they matter	A group booking of 6 people at an amusement park is 4x to 6x the GMV of a solo booking. Plan with Friends converts the highest-value transaction type in Activities.

Secondary: Non-District Users (Acquisition via Plan with Friends)

Every Plan with Friends session that includes a non-District user is a high-intent install moment. This user is not installing because of an ad. They are installing because their friends are already going and they will be left out if they do not join. This is the highest-quality acquisition channel in the Activities vertical because the motivation is social, not promotional.

04. City-by-City Launch Strategy

Not all cities launch simultaneously. The rollout follows a supply-readiness and user-density logic based on what was actually observed in the District product audit.

City	Phase	Why This Phase	Priority Venues for GTM
Bengaluru	Wave 1	Most diverse activity supply observed in product audit. Multiple categories: go-karting, workshops, adventure, escape rooms. High young working professional density.	Wonderla, Smaaash, Breakout Escape Rooms, pottery and art workshops
Delhi NCR	Wave 1	Highest amusement park concentration. KidZania, Worlds of Wonder, Go-Karting tracks in Noida and Gurugram. High family outing and college group density.	KidZania, Worlds of Wonder, Smaaash CP and Noida, F9 Go-Karting
Mumbai	Wave 2	Strong supply but concentrated. Wet n Joy, EsselWorld, Smaaash. Current District supply thinner than Delhi and Bengaluru. Wave 2 after soft launch learnings are applied.	EsselWorld, Imagica, Smaaash Lower Parel, go-kart tracks in Navi Mumbai
Jaipur	Wave 2	Smaller market but good supply diversity observed. Strong for workshops and adventure. Add after Wave 1 proves the model.	Water parks, adventure parks, pottery workshops
Hyderabad, Pune, Chennai	Wave 3	District Activities supply not yet deep in these cities per product audit. Supply-side partnerships needed before demand-side launch.	TBD based on supply audit before Wave 3

Wave 1 is Bengaluru and Delhi NCR only. These two cities have the supply depth to generate enough reviews and group bookings to validate both features before a broader rollout.

05. Launch Phases

Phase 1: Reviews and Ratings Launch (Weeks 1 to 14)

Pre-Launch: Weeks 1 to 8

- Seed corpus creation: send a retroactive review prompt to all verified District bookers who visited an amusement or activity venue in the past 60 days. Without a seed corpus, the first new user to visit a listing after launch sees zero reviews and the feature has no impact.
- Vendor communication: notify all active amusement and activity vendors in Wave 1 cities. Set expectations on the moderation policy, the dispute process, and the timeline. High-profile venues like KidZania and Worlds of Wonder need advance notice.
- Internal pilot: District team members test the full submission flow using real past bookings. All event tracking verified before any external users see the feature.
- Soft launch at 10% of bookers in Bengaluru and Delhi NCR. Monitor: submission rate, moderation queue SLA, listing page load time, vendor escalation count.

Launch: Weeks 9 to 14 (Full Rollout, Wave 1)

- Full rollout to 100% of Wave 1 users. All verified bookers in Bengaluru and Delhi NCR receive post-visit review prompts.
- In-app surface: on the Activity homepage in Wave 1 cities, a contextual banner reads 'Now with real reviews from District visitors.' Not a pop-up.
- Notification A/B test: Version A: 'How was your day at [Venue Name]? Rate in 30 seconds.' Version B: 'Families who visited [Venue Name] want to know what you thought. Leave a review.' Pick the winner by Week 12 and apply to Wave 2.
- Review milestone: when any venue crosses 50 reviews, that venue gets a Top Rated badge on their listing card.

Phase 2: Plan with Friends Launch (Weeks 14 to 28)

Pre-Launch: Weeks 14 to 18

- Deep-link routing setup and testing: the non-District user must tap the invite link, install the app, and land directly inside the Plan session in under 60 seconds. This is the highest technical risk in the GTM.
- Venue opt-in for group bookings: not all venues can handle a sudden booking of 12 people at once. Wave 1 launch targets only opted-in venues.
- WhatsApp share copy testing: test two invite message versions before launch.

Launch: Weeks 18 to 28

- Soft launch at 10% of Wave 1 users. Monitor: session completion rate, invite click-through rate, install-to-join conversion, payment collection rate within 48 hours.
- Full rollout to Wave 1 at Week 20 if soft launch metrics are healthy.
- Wave 2 cities (Mumbai, Jaipur) added at Week 24 for both Reviews and Plan with Friends simultaneously.
- Referral incentive: any non-District user who installs via a Plan with Friends invite and completes their first booking within 7 days gets a District credit of Rs 100 off their next solo activity booking.

06. Demand-Side Activation Tactics

For Reviews: Getting Users to Submit

Tactic	What it does	Channel
Post-visit push notification (personalized with venue name)	Sent 24 hours after visit. Single most important submission driver. A/B tested on copy and timing.	Push notification
In-app prompt on next District open after visit	Fallback for users who ignore push notifications. Appears as a soft card on the home screen.	In-app
Top Rated badge for venues with 50+ reviews	Creates visible social proof. Incentivizes venues to encourage their visitors to review on District.	Listing card
Review impact acknowledgment	After a user submits 3 reviews: 'Your reviews have helped people decide.' No gamification. Just the real impact.	In-app

For Plan with Friends: Getting Groups to Use It

Tactic	What it does	Channel
Plan with Friends entry point on amusement venue detail page	Placed directly alongside the Book Now button. Every user who visits a KidZania or Smaaash listing sees the option.	In-app, listing page
Weekend activity push notification	Friday afternoon: 'Planning a weekend outing? Try Plan with Friends for [top-rated venue near you].' Targets users who have not booked an activity in the past 30 days.	Push notification
Post-booking social card	After a group booking is confirmed, a shareable card is auto-generated. One tap to share on WhatsApp or Instagram Stories.	In-app, WhatsApp, Instagram
Rs 100 credit for first-time acquired users	Non-District users who install via invite and complete a solo booking within 7 days receive Rs 100 off. Converts acquisition into retention.	Deep-link + in-app

07. Supply-Side Activation

The GTM fails if vendors are not prepared. Amusement parks and activity venues are not like restaurants. A 1-star review on KidZania will be escalated to their PR team. A surprise group booking of 10 people at a go-kart track on a Saturday afternoon will overwhelm staff if they were not expecting it. Supply-side activation is not optional.

For Reviews: Vendor Preparation

Action	Who does it	When
Advance communication to all active amusement and activity vendors in Wave 1 cities explaining the reviews feature, moderation policy, and dispute process	District Vendor Partnership team	4 weeks before soft launch
Vendor dashboard update: vendors can see their aggregate rating, review count, and flag suspicious reviews for Trust and Safety review	Product + Engineering	Ready at soft launch
Top Rated badge criteria shared with vendors: 50+ reviews and a rating above 4.0 earns the badge. Gives vendors a clear, achievable goal.	PM + Vendor team	At full launch

For Plan with Friends: Venue Opt-In

Action	Who does it	When
Identify which amusement parks and activity venues can accept group bookings via District. Not all venues have real-time inventory management.	District Vendor Partnership + PM	6 weeks before Phase 2 soft launch
Opt-in program: venues that join Plan with Friends early get featured placement in the 'Plan with Friends: Popular Venues' carousel on the Activity homepage	PM + Growth	At Phase 2 launch
Group booking SLA: opted-in venues commit to honoring group bookings with a minimum of 2 hours advance notice. This SLA is part of the vendor agreement.	Vendor Partnership + Legal	Before Phase 2 soft launch

08. GTM Success Metrics

How these targets were set: Zomato does not publish feature-level pre-launch targets publicly. The targets below are directional planning estimates derived from three sources only: (1) Zomato's verified quarterly GOV data, (2) observable activity ticket prices from the District product audit, and (3) published industry benchmarks for push notification CTR and app review submission rates. Every assumption is stated explicitly. No number has been invented.

Reviews: 30 and 90-Day Targets

Basis for Reviews targets: District's going-out quarterly GOV was Rs 2,495 crore in Q3 FY25 across all categories including dining, movies, sports, and activities. Activities is one sub-segment of this. Wave 1 covers Bengaluru and Delhi NCR only. Push notification CTR benchmarks for contextual, personalised notifications are published at 8 to 20% by CleverTap and Pushwoosh industry reports (Q4 2024 to Q2 2025 data). Post-transaction review submission rates for Indian consumer apps typically range from 5 to 15% based on published benchmarks.

Metric	30 Days	90 Days	How this number was set
Verified reviews submitted per week (North Star)	300+ per week	1,500+ per week	If 0.5% of verified Activity bookers in Wave 1 submit a review in month one, based on District's going-out GOV of Rs 2,495 crore in Q3 FY25 and average ticket value of Rs 800 to Rs 1,200 per booking, this gives roughly 300 reviews per week. 1,500 at 90 days assumes improved notification copy from A/B testing.
% of Wave 1 activity listings with at least 1 verified review	15%+	50%+	Directional target based on seed corpus campaign in Weeks 3 to 4 covering verified bookers from the past 60 days before launch.
Post-visit push notification CTR	8%+ at 30 days	15%+ at 90 days	Industry benchmark: contextual personalised push notifications achieve 8 to 20% CTR (CleverTap, Pushwoosh 2024 to 2025 data). 8% is a conservative first-30-day target for a new feature. 15% assumes A/B test winner is applied.
Review submission rate from notified users	5%+	12%+	Industry benchmark for post-transaction review prompts on Indian consumer apps: 5 to 15%. 5% is the conservative first-30-day floor. 12% assumes copy optimisation from A/B test.
Booking conversion delta: listings with reviews vs control group without reviews	Establish baseline via holdout experiment	Measure direction of lift. Positive lift confirms hypothesis.	No benchmark exists for this specific feature on District. A holdout experiment from Day 1 (50% of users see reviews, 50% do not) creates the only

Metric	30 Days	90 Days	How this number was set
			honest measurement. A specific percentage target is not stated because there is no prior data to derive one from.
Vendor escalations about unfair reviews	Below 5 per week	Below 3 per week	Operational target based on vendor communication lead time of 4 weeks before launch. Not derived from external data.

Plan with Friends: 30 and 90-Day Targets

Basis for Plan with Friends targets: District's total going-out GOV in Q3 FY25 was Rs 2,495 crore per quarter across all categories. Wave 1 is Bengaluru and Delhi NCR only, a fraction of total District users. Group session GMV is derived from observed amusement park ticket prices (Rs 700 to Rs 1,500 per head) multiplied by estimated group sizes (3 to 5 people). Install conversion benchmarks are from published deep-link onboarding studies for Indian consumer apps. All volume targets are set well below what total District scale could support, because Activities is a sub-segment and Plan with Friends is a brand new feature with no adoption history.

Metric	30 Days	90 Days	How this number was set
Group bookings completed per week (North Star)	1,000+ per week	5,000+ per week	Set deliberately conservative relative to District's total scale. At Rs 2,495 crore quarterly GOV across all going-out categories, even 1,000 group bookings per week at Rs 4,000 average GMV per session is Rs 4 crore per week or roughly 1.5% of the total going-out quarterly GOV. 5,000 at 90 days assumes feature awareness has grown through the post-booking social card.
New District installs via Plan with Friends invite link	8,000+	35,000+	Derived from: if 1,000 group bookings per week involves an average of 4 friends per session and 20% of those friends do not have District installed, that is roughly 800 new install opportunities per week. Over 30 days the cumulative opportunity is around 12,000, with 8,000 accounting for drop-off. 35,000 at 90 days reflects compounding as feature awareness builds.
Average group size per completed booking	3+ people	4+ people	Observed average group size for amusement park outings in India is 3 to 6 people based on venue capacity and typical family or friend group sizes. 3 is the floor for a meaningful group transaction.
Average GMV per Plan with Friends session	Rs 3,000+	Rs 4,500+	Derived from observed District listing prices: amusement park tickets Rs 700 to Rs 1,500 per person, go-kart sessions Rs 600 to Rs 1,000 per person. A group of 3 to 4 people at these prices gives Rs 2,100 to Rs

Metric	30 Days	90 Days	How this number was set
			6,000 per session. Rs 3,000 is the conservative lower bound. Rs 4,500 assumes group size grows toward 4+ people at 90 days.
Install-to-join conversion (non-District users who tap invite link)	Above 35%	Above 50%	Benchmark: deep-link onboarding flows for Indian social apps where the install is motivated by a specific social occasion (not a generic ad) typically achieve 30 to 50% install-to-first-action conversion. 35% is the conservative first-30-day floor. 50% assumes the deep-link flow has been optimised after soft launch learnings.
Split payment collection rate within 48 hours of host payment	Above 65%	Above 80%	Directional target based on UPI payment completion behaviour in India. No published Zomato-specific benchmark exists. 65% is conservative given that social pressure from friends and the in-app reminder both drive completion.
Session abandonment rate (plan created but not booked before deadline)	Below 45%	Below 30%	Directional target only. No prior data exists for this feature. 45% abandonment in the first 30 days is expected for any new group coordination tool as users learn the flow. 30% at 90 days assumes deadline reminder notifications have been optimised.

09. Full Rollout Timeline

Week	Milestone	Detail	Owner
1 to 2	Stakeholder sign-off, vendor communication begins	All internal teams aligned. Wave 1 vendors notified of upcoming Reviews launch.	PM + Vendor
3 to 4	Seed corpus campaign	Retroactive review prompts sent to all verified bookers from past 60 days in Bengaluru and Delhi NCR. Goal: 150+ reviews before soft launch.	PM + Growth
5 to 8	Reviews internal pilot and soft launch (10%)	End-to-end testing. 10% soft launch in Wave 1. Monitor moderation queue, submission rate, vendor escalations.	PM + Tech
9 to 13	Reviews full rollout, Wave 1	100% of Wave 1 users. Notification A/B test runs. Top Rated badge live.	PM + Growth
14 to 17	Plan with Friends pre-launch	Deep-link testing. Venue opt-in program. WhatsApp copy testing. Soft launch prep.	PM + Tech
18 to 19	Plan with Friends soft launch (10%, Wave 1)	Bengaluru and Delhi NCR only. Amusement and go-kart category only. Monitor completion rate, install-to-join rate.	PM + Growth
20 to 23	Plan with Friends full rollout, Wave 1	100% of Wave 1 users. Post-booking social card live. Referral credit for acquired users active.	PM + Growth
24 to 28	Wave 2 launch: Mumbai and Jaipur	Both Reviews and Plan with Friends launch simultaneously in Wave 2 cities. Wave 1 learnings applied.	PM + Growth
30	90-day North Star review (Reviews)	1,500+ reviews per week target check. Conversion holdout experiment analysis. Decision on Wave 3 timing.	PM + Analytics
34	90-day North Star review (Plan with Friends)	5,000+ group bookings per week target check. Acquisition funnel analysis. Phase 2 feature scoping.	PM + Analytics

10. GTM Risks and Mitigation

Risk	Level	Mitigation
Seed corpus is too thin at soft launch. Users open reviewed listings and see only 1 to 2 reviews, which builds no confidence.	High	The retroactive review campaign in Weeks 3 to 4 is non-negotiable. The soft launch gate should require at least 10 top amusement and activity venues in each Wave 1 city to have 5+ reviews before going live. If this threshold is not met, the soft launch is delayed by one week.
High-profile amusement venue (KidZania, Worlds of Wonder) escalates a negative review to leadership	High	Vendor communication 4 weeks in advance. Clear moderation policy in writing. Dispute resolution SLA of 48 hours. Dedicated Vendor Partner point of contact for Wave 1 launch cities.

Risk	Level	Mitigation
Plan with Friends install-to-join drop-off is above 65%. Non-District users install but abandon before reaching the session.	High	The deep-link must land the user in the session within 3 taps of install. No onboarding carousel. No unnecessary permission requests. This flow must be user-tested with 10 non-District users before soft launch. If the test fails, the Phase 2 launch is delayed.
Wave 1 supply is insufficient for Plan with Friends. Not enough amusement venues opt in to group booking.	Medium	The opt-in program gives early-joining venues featured carousel placement. If fewer than 15 venues opt in across both Wave 1 cities before Phase 2 launch, restrict Plan with Friends to opted-in venues only and do not market the feature broadly until supply improves.
Reviews conversion lift is not measurable in 30 days because too few listings have reviews	Medium	Run a holdout experiment from Day 1: 50% of Wave 1 users see listings with reviews enabled, 50% see listings without. This creates a clean conversion comparison even with limited review volume.

Naveen Gupta | Aspiring Product Manager

Sourced numbers in this document: District downloads (Zomato Q3 FY25), going-out annualised GOV Rs 10,000 crore (Rahul Ganjoo, Q3 FY25), going-out quarterly GOV Rs 2,495 crore (Q3 FY25 earnings), 40%+ YoY growth guidance (Q3 FY25 shareholder letter), Paytm Insider acquisition Rs 2,048 crore (Zomato, September 2024), Zomato food delivery monthly transacting customers 20.7 million (Q2 FY25). GTM success metric targets are directional planning estimates derived from these numbers and published industry benchmarks, stated explicitly in the metrics table.
