

District by Zomato

Ratings and Reviews: Amusements and Activities

Document Version	v1.0 May 2026
Status	Draft
Product POC	Naveen Gupta
Vertical	District Amusements and Activities
Platform	District iOS + Android

01. The Problem

Picture this. It is a Saturday afternoon and a family of four in Delhi is planning a day out. Someone suggests Worlds of Wonder. Someone else says KidZania. The kids are already excited. The parents open District, find both listings, see prices, photos, and timings.

Then they pause.

There is no rating. No review. Not a single word from any family that has actually been there. Is the Rs 1,200 per head entry worth it? Are the rides safe? Is it crowded on weekends? The product gives no answer. So the parents leave District, open Google Maps, read 2,000 reviews there, and then maybe come back to book.

That detour is a product failure. Every amusement park, go-kart track, and water park on District faces this exact problem right now.

What Users Do Today

What the user does	Why	Cost to District
Leaves app, checks Google Maps for the venue	No ratings exist on District Activities	Lost conversion: user leaves and may not return to book
Picks a familiar venue they already know	Unknown venues with no social proof feel too risky	New or smaller amusement venues get no traction on the platform
Books directly from the venue website	No incremental trust from booking via District	Platform loses the transaction entirely

Why This Matters for the Business

Amusements and Activities is a high-consideration category. A family booking Worlds of Wonder is spending Rs 4,000 to Rs 6,000 for the day. A couple booking a go-kart session at Smaaash is spending Rs 1,500 to Rs 2,500. At this price point, reviews are the primary trust signal that converts browsing into booking. Without them, District is a discovery tool that sends users to complete the transaction elsewhere.

02. Objective

Build a verified ratings and reviews system for the Amusements and Activities vertical so that District users have the trust signal they need to book without leaving the platform.

Goals

1. Increase booking conversion for amusement and activity listings by surfacing verified star ratings and written reviews from real District bookers at the point of decision.
2. Reduce off-platform trust-seeking: users should not need to open Google Maps or JustDial to validate a venue they discovered on District.
3. Create a proprietary review corpus for the Activities vertical that improves over time and cannot be easily replicated by competitors.
4. Enable quality-based curation: use aggregated rating data to power a Top Rated filter and inform listing rankings.

Non-Goals

- Reviewing Dining, Movies, or Events on District: this PRD covers Activities only.
- Open reviews from non-bookers in Phase 1: fake review risk is too high before moderation infrastructure is established.
- AI-generated review summaries in Phase 1: there is no data to summarize yet. This is a Phase 2 feature.
- Building a social or community product: reviews are a booking conversion tool, not a content platform.

03. Target Users

Persona	Current Pain	What They Need
Rahul, 32 Delhi NCR Family planner booking KidZania or Worlds of Wonder for a weekend outing	Does extensive research before any family outing. Checks Google Maps, reads JustDial. District is just one of several tabs open.	Reviews from real families confirming the experience is worth it, especially anything mentioning kids or age suitability.
Priya, 24 Bengaluru Books activity dates at go-kart tracks and adventure parks every few weeks	Finds venues on District but always checks Google reviews before committing. Has been burned before by places that look good in photos.	A star rating and a few written reviews are enough to make her confident to book without leaving the app.
Arjun, 26 Mumbai High-frequency District user who visits 3 to 5 activities per month	Reviews restaurants on Zomato regularly. No equivalent review surface exists for activities on District.	A clean, fast way to share his experience after visiting a venue. He already does this on Google Maps.

04. The Solution

A verified ratings and reviews system built natively inside District's Amusements and Activities vertical. Users who have completed a booking via District can submit a star rating, optional written review (up to 500 characters), and up to 3 optional photos after their visit.

Reviews appear in two places: an aggregate star rating and review count on the activity listing card in browse and search views, and a full reviews section inside the activity detail page.

Only verified District bookers can submit reviews. The review CTA is unlocked only after the activity visit date has passed.

Why Verified Bookers Only

Amusement parks and activity venues are high-reputation businesses. A fake 1-star review on KidZania or Smaaash creates immediate vendor trust issues. The verified booker gate is non-negotiable in Phase 1. It is what makes District reviews more trustworthy than Google Maps, where anyone can leave a review without ever visiting.

Alternatives Considered

Option	Decision	Reason
Star rating only, no text	Rejected	A star without context does not answer real questions. Rahul needs to know if it is worth Rs 5,000 for a family. A number alone does not answer that.
Open reviews from all users	Rejected for Phase 1	Fake review risk before moderation infrastructure is ready. Phase 2 option after verified corpus is established.

Option	Decision	Reason
Verified reviews: star + optional text + optional photos	Selected	Verified gate ensures trust. Optional text adds context. Optional photos reduce friction. Minimum viable trust infrastructure for the vertical.

User Flow: Submitting a Review

5. Visit date for a District-booked amusement park or activity passes.
6. Within 24 hours, District sends a push notification: 'How was your day at Worlds of Wonder? Rate your experience in 30 seconds.'
7. User taps the notification and lands on the review screen, pre-loaded with the venue name and booking date.
8. Screen 1: Star Rating. User selects 1 to 5 stars. Sub-labels: 1 = Disappointing, 3 = Decent, 5 = Excellent. Star selection is required.
9. Screen 2: Written Review (Optional). Text field with 500-character limit. Placeholder: 'What did you like? What could be better?' User can skip.
10. Screen 3: Photos (Optional). Up to 3 photos from device camera roll. Max 10MB each. User can skip.
11. Screen 4: Preview and Submit. User sees their review before it goes live. A note states: 'Your review will be published after a brief quality check, typically within 24 hours.'

What Browsers See

- Listing card in browse and search: aggregate star rating and total review count appear directly below the venue name. Example: 4.3 stars, 218 reviews.
- Activity detail page: a Reviews section below the venue description shows the star breakdown by percentage, individual reviews sorted by most recent, each showing reviewer initials, star rating, visit date, written text, and photo thumbnails if present.
- Listings with zero reviews: no star widget is shown. The widget appears only after the first verified review is published.
- Reviewer privacy: display format is first name and last initial only. Example: Rahul S., visited March 2026.

05. How We Measure Success

North Star Metric

Verified Reviews Submitted per Week across the Amusements and Activities vertical.

A review counts only when: the user completed a booking via District, the activity date has passed, and the user submitted at least a star rating.

Target: 500 verified reviews per week at 30 days post-launch. Target: 2,500 per week at 90 days.

Supporting Metrics

Metric	Baseline	30 Days	90 Days
% of amusement and activity listings with at least 1 verified review	0%	20%+	60%+
Review submission rate after visit	0%	8%+	15%+
Booking conversion: listings with reviews vs without	No split	Measure gap	Close gap by 20%
% of reviewers adding written text (optional)	0%	25%+	35%+
Push notification CTR for review prompt	0%	Establish baseline	Above 20%

Guardrail Metrics: Must Not Get Worse

Guardrail	Alert Threshold
Fake or flagged review rate	Must NOT exceed 2% of submitted reviews
Vendor escalations about unfair reviews	Must NOT exceed 5 per week in first 30 days
Activity listing page load time	Must NOT increase by more than 300ms with review content loaded

06. User Stories

ID	Story
US01	As a verified District booker who visited Smaaash, I want to receive a prompt to review after my visit so that I can share my experience at the right moment without searching for how to do it.
US02	As a reviewer, I want to submit a star rating with optional written text so that I can share as much or as little as I want without being forced through a lengthy process.
US03	As a user browsing amusement parks, I want to see a star rating and review count on the listing card so that I can shortlist good venues before tapping into any individual listing.
US04	As a parent planning a family outing to KidZania, I want to read written reviews from real past visitors so that I can understand what the experience is like before spending Rs 5,000 on entry tickets.
US05	As a venue like Worlds of Wonder listed on District, I want negative reviews to go through a quality check before publication so that fake or malicious reviews do not damage my listing unfairly.
US06	As a support agent handling a review dispute, I want to trace any flagged review back to the original booking record so that I can resolve the complaint with verifiable data.

07. Key Edge Cases

Scenario	Trigger	System Behavior
User tries to review without a booking	User navigates to a venue page and looks for a review option without a booking record	No review CTA is surfaced. It is hidden, not just disabled.
User tries to review before their visit date	User books Worlds of Wonder for next Saturday and tries to review today	Review CTA is inactive until 24 hours after the visit date. Enforced by booking date check.
Venue has only 1 review	A new amusement park listing receives its first review, which is 2 stars	Star is displayed with a visible count indicator (1 review) so users understand the sample size is small.
Booking was cancelled or refunded	User's KidZania booking was cancelled. Review notification fires anyway.	If booking status is cancelled or refunded, the review notification trigger is suppressed. No review can be submitted.
Offensive review submitted	User submits a review with inappropriate language targeting staff	Automated content moderation flags it. Review enters a manual queue. Does not go live until cleared. User is notified if rejected.

08. Risks and Mitigation

Risk	Level	Mitigation
Low review volume in early weeks: not enough bookers to seed the corpus quickly	High	Growth team runs a retroactive push notification campaign to all verified bookers from the past 30 days before launch, creating an initial seed corpus.
Vendor backlash from negative reviews (amusement parks are high-profile brands)	Medium	Trust and Safety implements a vendor dispute tool. All disputes are reviewed against booking data. Vendors are not given reviewer identity.
Low notification CTR: users ignore the review prompt	Medium	A/B test notification copy and timing in soft launch. Test same-day prompt vs 24-hour delay. Test generic vs venue-name personalised copy.
Fake coordinated reviews for or against a specific amusement venue	Medium	Analytics monitors for anomalous review velocity. Any listing receiving 10+ reviews in 48 hours is flagged for manual audit.

09. Timeline

When	Milestone	Owner
Week 1	Stakeholder alignment and sign-off	PM
Week 2 to 3	Design wireframes: submission flow, listing card update, detail page reviews section	Design
Week 2 to 3	Tech scoping: review schema, moderation pipeline, rating aggregation API, notification trigger	Tech
Week 4 to 5	User testing with 10 real users across Delhi NCR and Bengaluru	PM + Design
Week 3 to 7	Development: submission flow, moderation queue, rating display	Tech
Week 7 to 8	Internal pilot: District team tests end-to-end using real bookings	PM + Tech
Week 9 to 11	Soft launch: 10% of bookers in Delhi NCR and Bengaluru	PM + Growth
Week 13	Full rollout: all active District cities	PM + Growth
Week 17	30-day North Star review	PM + Analytics

Critical path: the moderation pipeline is the highest technical risk. If automated moderation cannot be ready in time, Phase 1 ships with manual moderation on a 48-hour SLA. This is an acceptable fallback while automation is completed.

10. What Comes Next

This PRD covers Phase 1: verified submission flow, basic moderation, and star plus text plus photo display. The following features are planned based on learnings from the first 90 days.

Phase	Feature	Why It Comes Next
2	AI-powered review summary	Once 50+ reviews exist per listing, a one-line AI summary appears at the top of the reviews section. Example: Visitors love the rides at Worlds of Wonder but note long queues on weekends. Dramatically reduces reading burden for a browsing user.
2	Vendor response to reviews	Vendors can post a one-time official response to any published review. Increases accountability and gives District a feature that Tripadvisor and Google Maps already offer.
3	Open reviews for non-bookers	After Phase 1 establishes a verified corpus and moderation infrastructure, explore opening reviews to users who visited a venue but booked offline. Requires stronger fraud detection trained on Phase 1 data.
3	Reviews-based listing ranking	Incorporate review score and recency into algorithmic ranking. High-quality, recently-reviewed amusement venues surface higher in discovery. The ultimate business output of the reviews investment.

Naveen Gupta | Aspiring Product Manager

This PRD was written from a genuine observation: the trust gap in District's Activities vertical is costing real conversions today. Reviews are the fix.
